

# IN-BENCH PITCHER RINSER CLEANING INTRUCTIONS

The following cleaning procedure should be completed nightly at close of store. Failure to complete this cleaning procedure can result in poor operating drains. We highly suggest using the following cleaning procedure to keep your rinser in pristine condition.

## You Will Need:

- 1 x Cafetto Daily Milk Frother Cleaner
- 1 x soft cloth
- 1 x 2 litre container (wide enough to soak the Actuator Plate)

## Cleaning the Drain Tray, Actuator Plate, and Rinsler Surfaces:

1. Add 50ml of Daily Milk Frother Cleaner to 1 litre of warm water.

2. Remove the drain tray.

3. Unscrew the spray valve from the rinsler body.

4. Remove the Actuator Plate.

# IN-BENCH PITCHER RINSER CLEANING INTRUCTIONS

5. Add the removed parts to the Daily Milk Frother Cleaner solution. Allow the parts to soak while cleaning the remainder of the rinser.

6. Dip a soft cloth into the diluted cleaning solution and use to wipe down the surfaces of the rinser. Remove soaking parts from cleaning solution and rinse.

7. Pour the remaining diluted solution into the rinser slowly and allow the solution to drain. This will clean the drain piece and drain hose.

8. Built-up solids may need mechanical/hand agitation to remove.

# IN-BENCH PITCHER RINSER CLEANING INTRUCTIONS

Once complete and all milk residue has been removed, give the entire unit a final rinse with clean water.

Reassemble the Drain Tray,

Actuator Plate

and Spray Valve.

The rinser is now ready for the next day's operation.
